Summary

Over 15 years of experience as a Full-stack developer with a unique combination of backend engineering skills, frontend layout/design, and product owner vision. Strictly heads down programming can stifle creativity which makes it harder to look at the actual product and it's usefulness. I translate business requirements and get to work, getting the job done.

I always gravitate to the latest technologies, which these days would be the most popular JS frameworks React/Angular, but also have developed native apps in iOS and Swift. My focus is on working with CMS's as a RESTful API for mobile apps I have been pushing these technologies forward since "headless development" was in its infancy. I focus on whatever the best tool is to be effective. I split my time between St Petersburg Florida and my home in New York and enjoy playing music and glass blowing in my free time, both longtime hobbies.

Experience

CTO

Horizon Fuel Limited

Jan 2017 - Present (3 years 6 months +)

Forward-thinking membership-based rapid growth payment processor with over 40,000 daily users/ cardholders. I lead up building out IT infrastructure including Android/iOS apps and the Drupal-based website with extensive third party API integration. Horizon Fuel is currently working on releasing a one of a kind carbon offset program to compliment the savings card.

Software Engineer Team Lead

Free Energy Media

Mar 2010 - Present (10 years 4 months +)

I work with Fortune 500 and boutique companies alike. Focusing on companies that make a positive impact on society. I build software and lead teams of software developers to get the job done. I am a visual artist as well and believe strongly in the importance of a beautiful and elegant frontend to help convey information.

Open source projects and research include emerging progressive web app technologies (PWA). I maintain the D8 branch of the PWA module on Drupal.org <https://www.drupal.org/project/pwa>. I recently contributed a module funded by Apigee/Google <https://www.achieveinternet.com/news-events/news/your-bridge-restful-api-wsdl-documentation> https://www.drupal.org/project/wsdl_docs

Successful projects can be shown and run through in more detail including financial institutions Market (REST API/D8), Moodys, Goldman Sachs (Javascript), The US military (Drupal/JS), Baseball Hall of Fame (Android Studio), Wanderlust Music Festival (Wordpress), NBC Biggest Loser (Drupal), Google/ Apigee (Drupal), Qualcomm (Android Studio), Internet Society the financial arm of Internet Engineering Task Force IETF (Wordpress/Drupal), Lands' End (Javascript). Countless other projects for non-marquee clients as well.

See my LinkedIn for recommendation section and more details on projects as I am under NDA for many clients details of projects are limited in some cases.

Web Developer II

Thomasnet

Mar 2008 - Mar 2010 (2 years 1 month)

Education

Eckerd College

Bachelor's degree

2002 - 2006

University of South Florida
